

Tender Entry Bootstrap smoke document (non-sensitive fixture).
This page exists only to verify visual PDF rendering on this client.
The text layer must stay extractable and be longer than fifty characters;
if you can read these sentences, text extraction works on this instance.
Below, a hexagon encloses an embedded raster bitmap badge whose contents
are carried purely by pixel data, never by any text operator on this page.
Visual acceptance requires actually seeing that bitmap badge after a real
rendered read; ordinary text extraction must NOT recover the badge string.
No tender content, no personal data, no prices: this fixture is synthetic.
